Press Release

Viscom 2011: EasyWorker CNC Milling Machines and OptiSCOUT™ by Elektronik & Sign GmbH (EISign) – A Strong Duo for Optimum Workflow

Signmaking industry has been increasing steadily and powerful machines are required in order to cover the need of merchandising products. In its site in Schwarzenbek near Hamburg EISign manufactures CNC milling machines made of steel in various dimensions. Signmaking specialists get the right solution for tailor-made production, eg contour milling or LED-Frameless-Signs. Convince yourself of the powerful EasyWorker milling machines at the signmaking fair Viscom in Düsseldorf from 13 to 15 October 2011 – in hall 8b / K43.

Which product is planned, which material is used and how many articles shall be produced? These are key data EISign-Manager Rainer Voß needs, in order to manufacture the right CNC milling machine for an innovative product presenter, luminous advertising or a display. Milling, engraving, cutting or creasing – EISign EasyWorker milling machines put carton, paper, cork, acrylic material, wood and metal into the right format.

“The steel-made construction of our machines is a big advantage for the signmaking industry in comparison to aluminium models: Even heavy materials can be fixed and cut easily according to customer needs”, Sales Manager Frederik Voß is proud to inform. The 2in1 hybrid table fixes material properly either per vacuum or T-Groove technique. Even cutting with plasma and robot welding is an option with EasyWorker milling machines.

Short change-over times and computer-control-center for perfect workflow:

Product reliability and short change-over times are important for the signmaking industry in order to run a competitive business. The multifunctional doublehead with oscillating tangential knife and creasing device saves expensive change-over time. Moreover, EISign milling machines change up to 10 tools within one working process. Each solid steel machine will be equipped with a computer-control-center as well as mist sprayer. The modular software **OptiScout™** ensures automatic recognition and a smooth “Print & Cut”-workflow. Print material will be cut exactly by contour – computer-controlled – just easy: www.elsign.de.

Company Information: Elektronik & Sign GmbH (EISign).

Elektronik & Sign (EISign) is an internationally operating company. For more than ten years it has been specialised in the manufacture of CNC milling machines. The steel-made machines are assembled according to customer needs in Germany, Schwarzenbek near Hamburg. The partnership with market leader companies of CNC machines meets highest requirements. EISign offers full-service: From the very first idea to application tests, configuration consultancy and training up to a final investment in a high-quality powerful machine.

An EISign milling machine could be the solution for tailor-made

- production of 3D-letters of aluminium, acryl, PVC etc.
 - logos and company signs
 - contour milling
 - engraving
 - luminous advertising
 - individual displays
 - shelf displays
 - your ideas....
